FULL-STACK SOFTWARE ENGINEER

Full-Stack Engineer building production-ready AI systems and scalable web applications. Experienced in designing secure backend APIs, deploying containerized services on AWS, and building embeddable frontend architectures. Strong focus on clean architecture, safety-critical systems, and real-world deployment.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java

Frontend: React, Vite, TanStack Query, HTML/CSS

Backend: Node.js, Express, REST API Design

Cloud & DevOps: AWS (ECS, Fargate, ECR, ALB, CloudFront, CloudWatch), Docker, CI/CD

Databases: SQL, Firestore

Architecture: Monorepo, Middleware Pipelines, Structured Logging

Testing: Vitest, Supertest, React Testing Library

EXPERIENCE

AI-Driven Patient Engagement & Provider Matching Platform | Full-Stack Engineer

- Architected full-stack AI chatbot platform using TypeScript, React, and Node.js.
- Implemented crisis-detection rule engine intercepting unsafe language before LLM processing.
- Integrated AWS Bedrock with retrieval-augmented generation (RAG).
- Designed REST API with validation, rate limiting, and structured logging.
- Containerized backend using Docker and deployed on AWS ECS/Fargate.
- Built embeddable React widget compiled into single JavaScript bundle for WordPress integration.
- Contributed to CI/CD staging pipeline with automated deployments.

Real-Time Chat Application | Full-Stack Developer

- Built real-time messaging app using React, Firebase, and Vite.
- Implemented authentication using Firebase Auth.
- Designed responsive UI with profile management and media support.
- Structured Firestore database for scalable message storage.

Distributed Systems Microservices Project | Backend Developer

- Developed gRPC-based microservices architecture with central service registry.
- Implemented dynamic service discovery for client applications.
- Built multiple gRPC services with robust error handling.
- Designed integration tests to validate reliability and correctness.

Project Manager – Melaaura | Los Angeles, CA | 2025–Present

- Led cross-functional coordination across international manufacturers and designers.
- Managed budgets, timelines, and logistics workflows.
- Improved operational processes through structured documentation and automation.

EDUCATION

Arizona State University

Bachelor of Science in Software Engineering | Expected May 2026 | GPA: 3.71
